ERP ADAPTER
PRODUCT CARD

DIGITAL BANK & REPORTING
Cash Management

> ## Your challenges

Setting up a new format in your ERP requires the involvement of many stakeholders, particularly IT specialists. It is often a heavy process to implement and it can be costly if you do not have qualified resources available internally. In many cases, an extra budget is necessary to recruit global resources; and as a result, implementation can lead to months of delay.

> ## Product description

Fully integrated within SAP, the BNP Paribas ISO XML ADAPTER extracts payment information from your Accounts Payable System and eliminates the need for specialised development resources.

> ## User benefits

- **A simplified process**: instead of focusing resources on analysing hundreds of pages of specific documentation to develop the right format, BNP Paribas brings you an already pre-configured template which you can just directly download into your SAP system.
- **Substantial saving**s: from 30% for experienced teams, up to far more for teams who have never created SAP formats. All because, the BNP Paribas ERP ADAPTER decreases the time required for the testing phase between your company and BNP Paribas. As it is pre-configured, most of the testing has already been validated upstream.
